ISoftwareTV Review

Of the 5 software I bought and tried out, [ISoftwareTV](#) is the only one I didn't refund, and for good reasons.

Priced at \$34.95, the [ISoftwareTV software](#) is the cheapest "satellite tv on pc" type software I could find online. The video quality of most of the tv channels is pretty good - about the same as for the [DirectPCTV software](#) - but [ISoftwareTV](#) comes with a lower price tag.

Some people may get turned off by the fact that [ISoftwareTV](#) has "only" 3000+ channels, compared to certain other software that promise 6000+ or even 9000+ channels. Stop and think for a minute though: will you even have the time to go through all 3000+ channels? How many channels will you have time to watch on a regular basis? To me, 3000+ channels are WAY more than enough, and [ISoftware TV](#) is the cheapest TV for PC software. You really can't go wrong with this one.

However, if having lots of channels appeals to you, then go right ahead and give [Direct PCTV](#) and all of its 9000+ channels a try. After all, it only costs \$5 more than ISoftwareTV, and you'd be getting 6000+ more channels.

The only downside of [ISoftwareTV](#) is that I'm now spending too much time in front of my computer, mostly watching tv series and movies and sports. The plus side though, is I'm saving big on movie tickets and snacks from the theatre - I never really realized how much that was costing me every month until I stopped going.

All in all, I highly recommend the [ISoftwareTV program](#) - it costs the least money, video quality is good, and it has more channels than you'll ever have time to watch.

Did I mention [ISoftware TV](#) is my favorite software of the 5? I give it #1 ranking, plus both thumbs up! [Click Here to check out ISoftwareTV now.](#)
